Homepage Review & Improvement Suggestions

1. Hero Section Issue
The hero section currently contains only text such as "Your Complete Healthcare Partner." There is no strong visual element that builds trust with users. For a healthcare website, visual trust elements are very important. Additionally, the right side of the hero section shows random cards which do not clearly communicate the main services.
Improvement
To improve the hero section:
- Add a healthcare-related illustration or image, such as doctors, a medical team, or a healthcare environment.
- This will make the section look more trustworthy and professional.
- Replace the four random cards on the right side with three clear service cards, such as:
  - Buy Medicines
  - Book Lab Tests
  - Consult a Doctor

This will make the hero section more structured and user-friendly.

2. Color Theme Issue
The website currently uses many colors such as green, blue, pink, and purple, which makes the interface look overloaded and visually inconsistent.
Improvement
Use a more consistent and structured color system:
- Choose one primary color, such as green or blue, because they are commonly used in healthcare platforms.
- Use soft secondary colors for different services:
  - Medicine – Light Green
  - Lab Test – Blue
  - Doctor Consultation – Purple
  - Ayurveda – Beige

This will make the website look cleaner and more organized.

3. Icon Style Issue
The icon styles used on the website are inconsistent. Some icons look like emojis, while others look like illustrations. This inconsistency reduces the professional look of the website.
Improvement
Use a single consistent icon style across the website. Minimal and professional icons can be used, such as:
- Heroicons
- Feather Icons

Using minimal icons will improve visual consistency and make the design more professional.

4. "Shop by Health Concern" Section Issue
The Shop by Health Concern section currently looks weak and visually unappealing. The icons are very small and the text is placed in a single horizontal row. Because of this, the section does not feel interactive and looks flat. Users may not easily notice or click on these options.
Improvement
This section can be improved by converting it into a card-based layout. Each health concern should appear as a separate card so that it looks clickable and easy to understand.
Each card can include:
- Icon at the top
- Health concern name below the icon

Example structure:

❤
Heart Care

🧠
Mental Wellness

🩸
Diabetes

🛡️
Immunity

This type of layout will make the section look more organized, interactive, and visually engaging for users. It will also improve the overall user experience of the homepage.

5. Product Cards Issue
The product cards currently look very basic and do not give a strong e-commerce experience.
Improvement
Each product card should include:
- Product Image
- Product Name
- Rating
- Price
- Discount Badge
- Add to Cart button

This will make the product section more similar to professional e-commerce platforms and improve usability.

6. Trust Elements Missing
Important trust signals are missing from the homepage. In healthcare platforms, users need reassurance about reliability and safety.
Improvement
Add a trust section highlighting important assurances, such as:
- Certified Doctors
- Government Approved Labs
- Secure Payments
- Genuine Medicines

These elements will help build user confidence.

7. Button Improvement
Currently, the website uses simple buttons like "Add to Cart" and "Book Now." These buttons look basic and do not clearly communicate the actions.
Improvement
Use clearer action-based buttons with icons, such as:
- Add Medicine
- Book Lab Test
- Consult Doctor

Icons can also be added to make the actions visually clearer.

8. Offer Section Issue
The offer section at the bottom contains three random cards that do not look properly organized.
Improvement
Create a structured section titled "Health Offers for You."
Include three clear offer cards:
1. First Order Discount
2. Lab Test Package Offers
3. Free Doctor Consultation

This will make the offers more noticeable and useful for users.

9. Homepage Flow Issue
The homepage structure currently feels random and lacks a proper flow.
Improvement
The homepage should follow a logical user journey. A better homepage structure would be:
1. Hero Section
2. Main Services
3. Shop by Health Concern
4. Popular Medicines
5. Lab Test Services
6. Doctor Consultation
7. Ayurveda Products
8. Special Offers
9. Testimonials
10. Footer
